

EMERGENCY SYSTEM

HELICOPTER SUSPENDED BAG ZV-10

The suspended bag under the helicopter is used for emergency transport of injured person by aerial or mountain services, or for saving the persons at fires, mining or other disasters.

The bag enables patient's protection against weather effects as well as prevention from a cold. The vacuum fixation mattress with cover EM-10 is put on the bottom of the suspended bag. After laying and fixing of a patient over chest and hips, the vacuum pump is used for shaping a mattress and it ensures a secure immobilization of patient.

This product is made from polyamide textile materials using a stitching technology. Fixing and suspending metal parts are used from the assortment of mountaineering and aeronautics.

The bag ZV-10 includes:

- ZV – 10 Suspended bag
- EM – 10 Vacuum fixation mattress with cover
- EM – 20 Vacuum pump with pedal

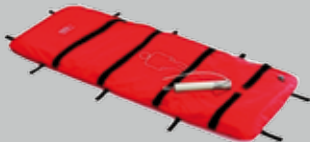

Total weight: 11 kg

Dimensions: 200 x 80x 25 cm

The suspended bag consists of special thermal cover, 12 suspending ropes which are joined by one special secure buckle on end and 5 over body straps with plastic buckles.
