

# TENT SYSTEM

## TENT SYSTEM TYPE „ES“ FOR EMERGENCY USAGE

These tents are designed to be used in crisis situations, in which it is essential to ensure backgrounds and sufficient comfort for patient admission, medical treatment and hospitalization of the injured, staff, storage areas, etc. in field conditions. The main advantage of the system is sufficient stability of the inflatable construction without usage of supporting metal or plastic components. The tents are made on the basis of pressurized double-room tube construction. The double-room system ensures sufficient stability in case of damage occurrence, thereby allowing the tents to be repaired. The tent roof is made of lightweight material; therefore the tents offer easy handling and transportation. They have a universal width in order to create various shapes and variations of mobile working places.
