

TENT SYSTEM

TENT SYSTEM TYPE „EZ“ FOR RESCUE USAGE

These tents are designed to be used by civil sector (health rescue service, police, fire brigades etc.) in order to create sufficient shelters for assembly and treatment of the injured or units involved. The EZ tents have simple shapes, compact dimensions and offer easy handling and transportation due to materials used and the fact that they are light. The main advantage of the system is sufficient stability of the construction without usage of supporting metal or plastic components. Majority of the tents (EZ 24, EZ 40, EZ 45) are made on the basis of pressurized double-room tube construction. The double-room system ensures sufficient stability in case of damage occurrence, thereby allowing the tents to be repaired.
